

## The MNLS system OptimusMed

is a further development of the OBERON® system. The worldwide unique biophoton-based technology in 2006, the OptimusMed is a certified system for information medicine diagnostics and therapy.

### What are MNLS systems?

Systems of "Multidimensional Non-Linear Spectrography" (MNLS for short) are recognised analysis methods in complementary medicine.

and balancing systems. They enable information medical view of the energetic and functional condition of the body.

Deviations from the organism's state of order are shown by

- in the comprehensive frequency database
- in the entropy points and
- in the detailed curve representation of structure and function of the individual organs and tissue types.

There is also a wealth of information on pathological tendencies, e.g. microorganisms, toxins, allergens, Food contamination and much more.

# OptimusMed

DIAGNOSTIC AND THERAPY SYSTEMS

## Service and development from a single source

- ✓ Research, production and continuous development in Germany
- ✓ Close collaboration with scientists and doctors
- ✓ Technical and medical support
- ✓ Comprehensive training and further education through attendance and Online events
- ✓ Basic and user training included in the purchase price

## Complete Your Practice services

Biophoton-based  
Comprehensively designed  
Medically certified

Legal manufacturer: MPC INTERNATIONAL S.A.26, Boulevard Royal, 2449 Luxembourg, Luxembourg

We would like to point out that the methods and MNLS systems presented here, as well as their effects are neither scientifically recognised by conventional medicine nor are they considered proven.

## Diagnostics and Therapiesystem

## Measurement down to the deepest structures

The OptimusMed system enables measurements of the organ at the highest level down to the deepest structures such as the example, the adenosine triphosphate-synthesising system.

In this way, diseases can be recognised not only superficially, but diagnostics and therapy can be causal and the treatment can even begin in the deepest structure.

### 1 Scan

The scan with the OptimusMed is performed using special Headphones with biophoton trigger sensors. Virtual Organ images show the scan results on the computer screen.

### 2 Diagnostics

Based on the organ images and the comprehensive database you can analyse the results directly and immediately start discuss with your clients.

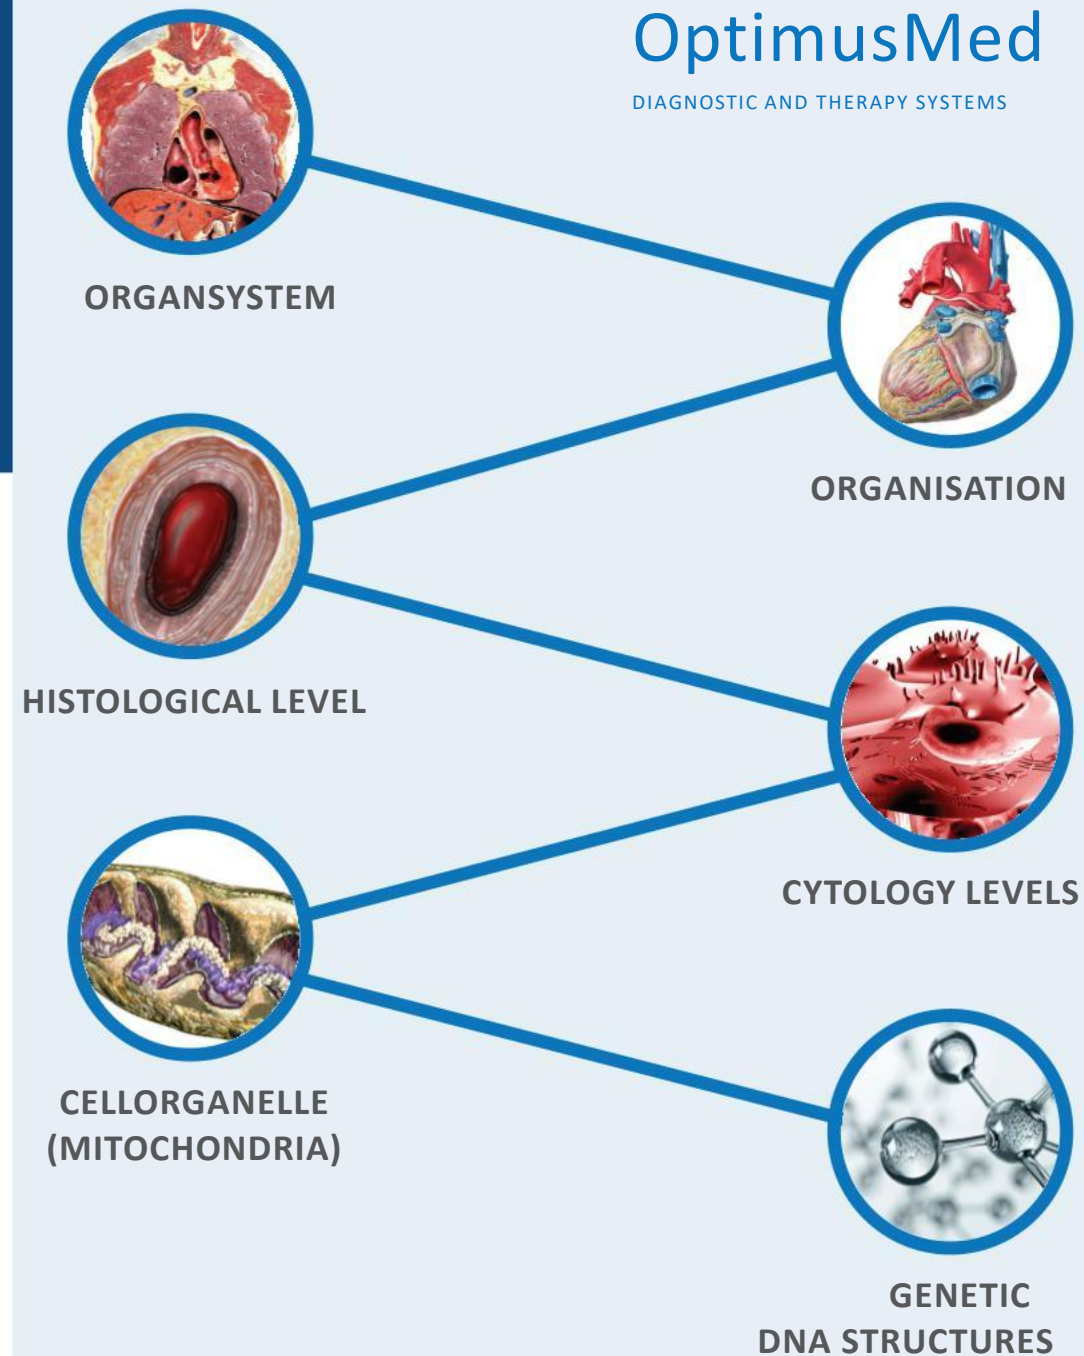

### 3 Therapy plan creation

To support the therapy, the system has several Functions:

- Automatic generation of helpful preparations
- Testing external substances
- Balancing any imbalances found

## OptimusMed

DIAGNOSTIC AND THERAPY SYSTEMS

## Advantages for your clients

- ✓ Non-invasive measuring method
- ✓ Fast and precise measurement
- ✓ Tackling causes instead of symptoms
- ✓ Customised therapy plan
- ✓ Personalised grocery list
- ✓ Low costs due to targeted examination

## Advantages for you

- ✓ Clear presentation of the analysis results and thus Better motivation of clients to actively participate in their recovery to participate
- ✓ Automatic and manual scan possible (comprehensive or selective)
- ✓ MNLS systems are easy to learn and easy to use. Applicable
- ✓ Excellent addition to all methods in your practice
- ✓ With the help of a comprehensive database, specific questions e.g. after stress (spike proteins, pflances, heavy metal, graphene oxide, chemistry, electrosmog, geopathologies), psychological Answers to influences or food intolerances become.
